Memo to File:

Re: Atlas Minerals
Cactus Rat Mine
Grand County, Utah
ACT/019/009

On January 19th 1978, Ron Daniels, Jim Smith, and Mike Thompson inspected the Cactus Rat Mine, located in the Yellow Cat Region. The area has been extensively mined in the past and numerous adits, spoil piles, pits, and piles of debris are present throughout the area.

Proposed mining operations consist mostly of reactivating old workings. The initial work will consist of a small strip operation that will "cleanup" an old shallow underground mine. It will be covered by a Declaration of Exemption so the operation can commence while the entire plan is being approved. The spoils produced during the mining operation will be backfilled into existing pits and workings.

Vegetation is very sparse, approximately two percent cover, and consists of fourwing saltbrush, greasewood, gardeners and mat saltbrush, shadscale, and indian ricegrass.

The Mining and Reclamation Plan for the entire mine operation will be submitted by Atlas Minerals in the near future.

JWS
Ron
Return to Mike,
Elaborate more
on the site, veg,
etc and the fact
that it is in an
area previously
mined. Ron
